

A dead simple git cheatsheet. [Follow @tiivik](#) for updates!

BRANCHES.

<code>git branch</code>	List all local branches.	Copy
<code>git branch -a</code>	List remote and local branches.	Copy
<code>git checkout -b branch_name</code>	Create a local branch and switch to it.	Copy
<code>git checkout branch_name</code>	Switch to an existing branch.	Copy
<code>git push origin branch_name</code>	Push branch to remote.	Copy
<code>git branch -m new_name</code>	Rename current branch.	Copy
<code>git branch -d branch_name</code>	Delete a local branch.	Copy
<code>git push origin :branch_name</code>	Delete a remote branch.	Copy

LOGS.

<code>git log --oneline</code>	Show commit history in single lines.	Copy
<code>git log -2</code>	Show commit history for last N commits.	Copy
<code>git log -p -2</code>	Show commit history for last N commits with diff.	Copy
<code>git diff</code>	Show all local file changes in the working tree.	Copy
<code>git diff myfile</code>	Show changes made to a file.	Copy
<code>git blame myfile</code>	Show who changed what & when in a file.	Copy
<code>git remote show origin</code>	Show remote branches and their mapping to local.	Copy

CLEANUP.

<code>git clean -f</code>	Delete all untracked files.	Copy
<code>git clean -df</code>	Delete all untracked files and directories.	Copy
<code>git checkout -- .</code>	Undo local modifications to all files.	Copy
<code>git reset HEAD myfile</code>	Unstage a file.	Copy

TAGS.

<code>git pull --tags</code>	Get remote tags.	Copy
<code>git checkout tag_name</code>	Switch to an existing tag.	Copy
<code>git tag</code>	List all tags.	Copy
<code>git tag -a tag_name -m "tag message"</code>	Create a new tag.	Copy
<code>git push --tags</code>	Push all tags to remote repo.	Copy

STASHES.

<code>git stash save "stash name" && git stash</code>	Save changes to a stash.	Copy
<code>git stash list</code>	List all stashes.	Copy
<code>git stash pop</code>	Apply a stash and delete it from stash list.	Copy
